

THE ULTIMATE IN WATER SOFTENING

Monarch Water has developed a 30l version for its HE range. Available for small commercial and large residential applications, the Ultimate Matrix is a new solution to tackle hard water and the problems it causes.

Building on the strength of the existing range and featuring all its benefits, the new model measures 1,038mm (h) x 270mm (w) x 485mm (d). Its high efficiency capacity of 5,500l at 300ppm between regenerations makes it suitable for large families of between seven to 18 people, as well as small businesses, the firm says.

Just like its counterparts, the Ultimate Matrix conserves water through its Opti-Brining technology, which means that the unit only regenerates when

needed – using less water, salt and energy than ever before.

JOIN THE QUICK RELEASE REVOLUTION

Quikcore is a quick release system designed for use on 1/2" threaded core bits from 38mm up to 127mm diameter.

Manufactured from Great British high tensile steel, Quikcore is a product to rely on for even the most demanding environments, the company says, and is tested in excess of 250Nm torque (typical core drill approx. 80Nm torque).

The simple design prevents the need to hit spanners with a hammer, which is commonly as a result of the core bit binding up so tight on the drill or extension.

The waste removal knock out tool is designed to fit inside the core adaptors once separated from the drill or extension, via the quick release clip. This prevents the need to hit the core bits with a hammer when removing the unwanted waste material, which may lead to denting/damaging the equipment, and can be frustrating.

Quikcore is available for next day delivery from any Graham Plumbers Merchant, and all product codes, prices, and the installation video can be seen on the Quikcore website.
