

MONARCH WATER

ULTRA HE & PREMIO HE

Water Softener Installation Guide

Scan to register and validate your warranty or visit monarchwater.co.uk/registration

Model	Dims H x W x D (mm)	Family size	Daily capacity (litres @ 300 ppm)	Salt use per regen (kg)	Max flow rate (lpm)	Water Pressure (bar)	Max Op. Temp (°C)	Connection
Ultra HE	557 x 269 x 489	1 - 10	1,520	Tablet/Block 0.84 - 1.2	65	1.5 - 5	49	3/4" mbsp
Premio HE	786 x 269 x 489	2 - 20	3,040	Tablet 1.68 - 2.4	61	1.5 - 5	49	3/4" mbsp

If using Ultraflow hoses for 28mm applications please allow an extra 10mm to width.
Family size is based on allowing 142 litres per person per day and a water hardness of 300ppm.

The symbol opposite means that according to United Kingdom and European Union member countries laws and regulations your product and/or its battery shall be disposed of separately from household waste.

When this product reaches its end of life, take it to a collection point designated by local authorities. The separate collection and recycling of your product and/ or its battery at the time of disposal will help conserve natural resources and ensure that it is recycled in a manner that protects human health and the environment.

Thank you for choosing our water softener. Please read the following carefully, which if followed correctly, should ensure the installation is trouble free.

/ A. PLANNING THE INSTALLATION

- Always observe the water byelaws.
 - Ensure there is only one rising main.
 - **Make sure you have allowed space for access to the unit for salt filling and for any possible maintenance in the future.**
 - Check the water pressure and locate the rising main, and a drain facility. Be aware of condensation on pipes and the outside of the softener occurring in warm environments.
 - This softener is supplied with both a battery and a plug-in transformer. The softener needs only one of these power sources to function. If you opt for the plug-in transformer, please see Page 9 in this guide when connecting the power up at step M in this guide.
- If you are using the supplied battery to power the unit, please follow this guide and ensure the battery is inserted when you have reached Step M in this guide.

- This softener has reversible valve technology, meaning the valve connector can be located on either side of the softener. If you would like to relocate the valve connection, please scan the QR code for instructions -

/ B. SITING THE SOFTENER - See Fig 1 Page 4

- Where possible, this should be close to the rising main.
- Tee off for mains water supply to outside tap if applicable.
- Rapid-Fit bypass has a 3/8" speedfit connection for flexi tube connection to a dedicated drinking water faucet. Please enquire today to find out more about our Monarch drinking water tap on +44 (0) 1986 784759 (opt 1) or email info@monarchwater.co.uk
- The distance between the softener and the drain should be as short as possible, to ensure that both the drain and the overflow are not subject to freezing, or over 120° F/49°C.
- If siting the softener within a kitchen cupboard, loft etc. ensure that the base/ floor is adequately supported.
- Please ensure that the softener is not hard plumbed in and you use the flexible hoses provided.
- Ensure the softener is easily accessible, to allow engineers to complete any service work required.
- If the softener is being installed in your loft, 1st, 2nd floor etc, it is strongly recommended to house the softener within a 25-gallon plastic tank and insulate well. Monarch take no responsibility for any water damage etc if this recommendation is not applied.
- Please ensure an overflow elbow is fitted on the plastic tank and must be below the overflow of the softener and must be 3/4" in size. Please also ensure the pipe connected to the overflow runs downhill and is connected to a suitable drain with a 20mm air gap.

/ C. CHECK VALVE

Domestic Ion exchange water softeners are in fluid category 2. The Rapid-Fit bypass (optional) incorporates a high flow check valve in accordance with this requirement. All other applications require a double check valve.

/ D. DRINKING WATER FACILITY

The Regulations require that 'All premises supplied with water for domestic purposes shall have at least one tap conveniently situated for the drawing of drinking water'. Drinking water must comply with the Water Supply (Water Quality) Regulations 2000, which stipulate a maximum limit of 200 mg/l (milligrams per litre) for sodium. The Department of Health recommends that this sodium limit should not be exceeded for infant feed preparation and for those individuals on a medically supervised low-sodium diet. The provision of an unsoftened drinking water tap is essential where the hardness of the public supply and its sodium content as supplied would result in the softened water exceeding 200 mg/l sodium limit. For ion exchange softened water, this limit will be exceeded where the water is extremely hard, i.e. above 425 milligrams per litre as CaCO₃ (assuming zero sodium in the public supply).

/ E. MATERIAL CHECK LIST

Ensure all installation components comply with appropriate water regulations.

- PSU027HE & PSP022HE includes a Monarch Rapid-Fit bypass installation kit suitable for 15mm and 22mm plumbing systems.
- For 15mm pipework use the compression reducers supplied.
- For 28mm supplies a full upgrade of the softener is available - details on request - ref PS28UGHE.

/ RAPID-FIT BYPASS INSTALLATION INSTRUCTIONS

Direction arrows are embossed on the bypass as follows;

SUPPLY IN - is hard water supply in from mains

SUPPLY OUT - is soft water supply back to property

TO UNIT - is mains hard water from bypass to softener inlet via flexi hose

FROM UNIT - is soft water from the softener outlet back to bypass via flexi hose

Every Rapid-Fit bypass comes with the following;

1. 2 x Stainless steel hoses
2. 2 x 24.6mm fibre washers (inserted)
3. 2 x 2mm x 3/4" FI brass adaptors
4. 2 x 22mm x 15mm reducers

- For Combi boilers upgrade hoses to Maxflow hoses - see image right.
- For 22mm Unvented/Pressurised systems, upgrade to Maxflow hoses and do not use the 22mm x 15mm reducers.
- For 28mm applications, upgrade to 1". Code is M28UGHE if ordered with softener. For upgrade after softener order, code becomes M28UGLOHE.

Connection of brass adaptor (22 x 3/4 FI & 28 x 1" FI) to Rapid-Fit bypass:

1. Fibre washers are pre inserted against shoulder inside brass female thread - Fig A. IMPORTANT - Do not use 3/4" industry standard washers here.
2. For additional security, Fernox LS-X or Loctite SI 5331 may be used (see image above). Simply apply to male thread of noryl bypass adaptor and to inside of female thread of brass fitting - Fig B. In all cases, fibre washer must be used.
3. Tighten male noryl connection into brass adaptor solidly up against fibre washer - Fig C. Remove any excess sealant inside brass/noryl adaptor assembly.
4. Place assembled connection back into bypass and fix with clip - Fig D.
5. Connect water mains supply pipe to SUPPLY IN connection
6. Repeat 1-4 above for soft water mains supply back to SUPPLY OUT connection.

/ IMPORTANT

Noryl bypass adaptor in an 'o' ring seal within main bypass body, therefore it may be easier to connect brass fitting to adaptor if adaptor is remote from bypass. To remove adaptor, simply remove holding clip. Do not use heat on any connection that may affect the bypass.

FIG A

FIG B

FIG C

FIG D

/ F. WATER PRESSURE TEST

- It is **IMPORTANT** that a pressure check is carried out.
- Low and high pressure can result in either damage to, or failure of the unit.
- If daytime static water pressure* exceeds 3.5 bar (50psi) a 5 bar (70psi) pressure limiter should be fitted. *50psi daytime pressure can reach nearly 100psi at night!
- Minimum dynamic pressure must exceed 1.5 bar.
- If in any doubt please call us on +44 (0) 1986 784759

/ G. INSTALL RAPID-FIT BYPASS

If using the Rapid-Fit Bypass, form an installation as per Fig 1 below - See previous page for more information.

Fig 1.

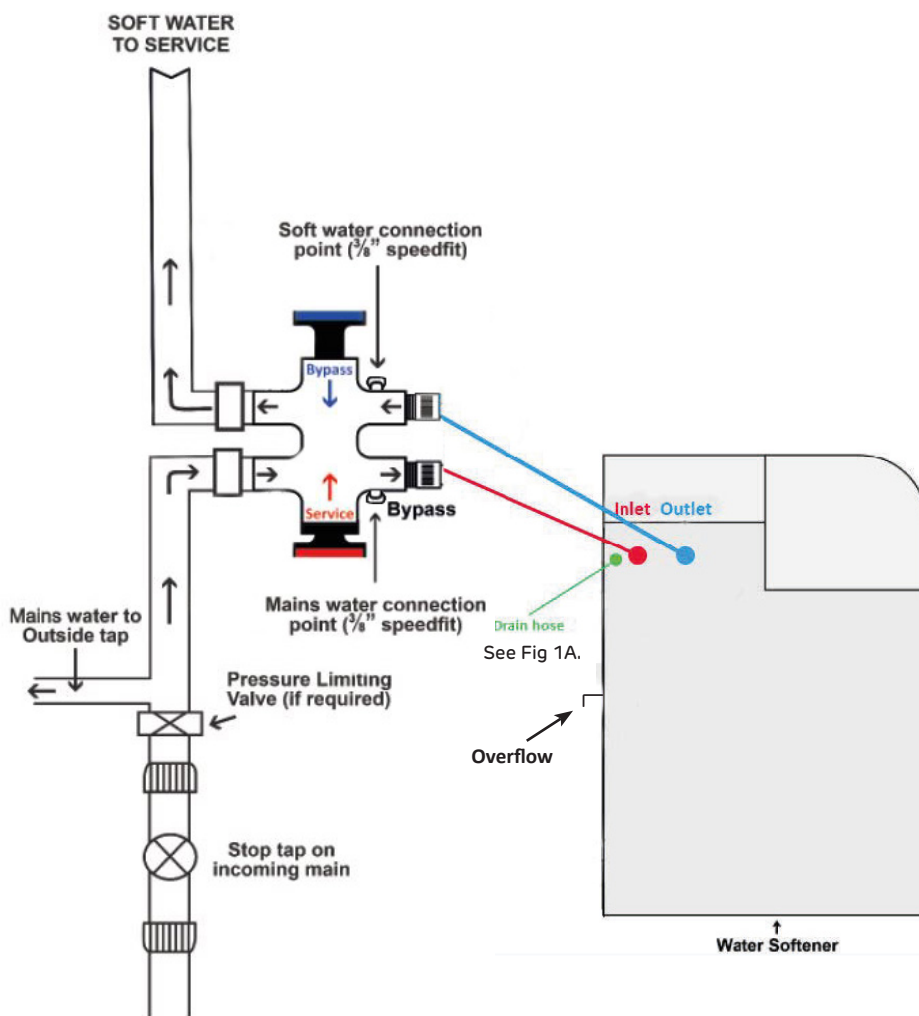

Fig 1A.

/ Check List

- Water pressure 1.5– 5 bar (20 – 70psi)
- Access to incoming water supply
- Battery or Transformer power option
- Access to drain
- Installation preferably on an outside wall for the overflow
- Easy access to fill unit with salt & any future maintenance.

/ H. INLET & OUTLET CONNECTIONS See Fig 2

- Remove both salt lid and main cover to access inlet and outlet connections.
- Remove grey retaining clips and BSP connection points (indicated red and blue in fig 2). Connect inlet hose to male BSP connection point (indicated red in fig 2) and connect outlet hose to BSP connection (indicated blue in fig 2), using supplied washers and tighten to seal.
- Then reinsert BSP connection points back into valve body. Fit grey clips. The connection points are designed to rotate once inserted in valve body. This removes any stress/pressure placed upon the angle/direction of the hoses when connecting them to the Rapid-Fit bypass. Under no circumstances use washing machines hoses or plumb the softener in solid copper pipe.

Fig 2.

Inlet & Outlet connections & drain connection

/ I. DRAIN CONNECTION

- 2.5mtrs of white low pressure hose is supplied with the unit. This is to be used for both the drain and overflow. The drain connection is the white elbow on the side (pictured green in Fig 2). Fix drain hose to white barbed elbow with jubilee clip (supplied).
- Run the drain hose to either an upstand or an outside drain. A minimum air gap of 20mm should exist at the end of the drain line.
- If you need to extend the drain hose, this can be done by connecting to a 15mm copper tube for a maximum run of 4 metres, with a minimum daytime pressure of 40 psi. If over 4 metres please use 22mm copper tube.
- Ensure that the drain hose is adequately fixed to the copper pipe.
- The drain hose must not dip or be kinked in any way, as this will lead to an overflow of the machine.
- Uphill? The white flexible drain hose can run uphill internally, for a maximum of 3 feet, with a minimum water pressure of 40 psi.
- Softened water will have no adverse effect on a septic tank.
- Under no circumstances should the softener drain and overflow share the same pipe. This could lead to foul smells entering the salt cabinet from the main drain via the overflow. Also if the common drain ever gets blocked, the regen water can re-enter the softener via the overflow pipe.

/ J. OVERFLOW CONNECTION - Important

- The hose for the overflow should be cut from the white low pressure hose supplied with the unit.
- The overflow connection is the 1/2" hose spigot on the rear of the cabinet - no jubilee clip required.
- The overflow must be run downhill and terminate immediately through an outside wall without kinks or restriction.
- A 22mm copper protective sleeve through the outside wall will help prevent kinking of the hose.

/ K. TEST INSTALLATION FOR LEAKS

- Place Rapid-Fit bypass in Bypass position by pushing plunger as per directional arrow - see Fig 3
- Open mains stopcock slowly to flush the new pipe work. This can be done using a 'soft' mains tap, i.e. utility room cold tap or wash hand basin in a bathroom.
- Check all connections for leaks.

/ L. OBTAIN YOUR WATER HARDNESS

- These instructions apply to the enclosed test kit only.
- Run hard water tap for approx. 1 minute and rinse the test tube well.
- Fill the test tube up to the 10ml level. Add 2 drops of the dark solution and mix gently. If the water sample contains hardness it will turn red.
- Add the dark solution in batches of 5 drops, holding the dropper bottle at 45 degrees.
- Mix gently after each 5 drops.
- Count the drops needed until the colour of the sample in the test tube changes from a dark red to a dark blue/green.
- You need this figure for when SET WATER HARDNESS as per O overleaf.

Fig 3.

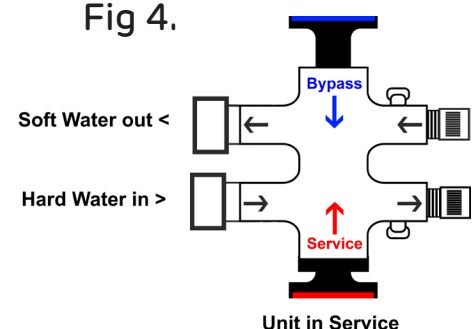

Fig 4.

/ M. SETTING THE ELECTRONIC CONTROLLER

- If using battery power, ensure battery (supplied) is fitted into the battery compartment, alternatively, if using the plug-in transformer please see Page 9. The softener display will say WELCOME as soon as battery or transformer is connected.
- The Display shows both the Time and Hardness. The Time and Hardness will alternate every 10 seconds.
- To finalise commissioning of the softener, you need to set both Time (24hr clock in hours and minutes) and the water Hardness as determined by the number of drops in your water hardness test.

/ N. SET TIME OF DAY

- Wait until display says time of day (this should be pre-programmed). Should you need to change the time please do the following:
- Press Up button to show flashing Hours. Please note it is a 24hr clock.
- Press Up or Down button to set Hours.
- Press  to confirm Hours.
- After confirming Hours, display will show minutes flashing.
- Use Up and Down button to set Minutes.
- Press  to confirm Minutes.

/ O. SET WATER HARDNESS

- Wait until display changes to Hardness.
- Use Up/Down buttons to set number as determined by your water hardness test.
- Press  to confirm setting.

UP TO 30 DROPS	ADVANCE ELECTRONIC DISPLAY TO 30 (REC MIN SETTING)
31 - 35 drops	advance electronic display to 35
36 - 40 drops	advance electronic display to 40
41 - 45 drops	advance electronic display to 45
46 - 50 drops	advance electronic display to 50

- You have finished the programming.
- The display will now automatically revert back to the alternating display. After 30 seconds the display will go to sleep. This helps prolong the life of the battery.
- If at any time you want to reset a figure, press the up or down arrow to turn the display back on. Then wait until the display changes to the relevant setting and then reprogramme as required.

/ P. FLUSH SOFTENER - IMPORTANT

- For Ultra HE and Premio HE add 4 litres of water upon initial installation. Place Rapid-Fit bypass in Service position by pushing plunger as per directional arrow - see Fig 4 previous page.
- Check for leaks.
- Leave a soft mains tap e.g. bathroom wash hand basin, to run for a minimum of 5 minutes to purge any air and 'resin dust' from the softener (resin dust may appear orange in colour).
- Please ensure the unit is kept full of salt. The Ultra HE can use either tablets or blocks. The Premio HE must use tablets only. When using tablet salt, please do not fill salt compartment 100% full, kindly leave a gap of 30mm between the top of the salt and the front of the salt compartment - please use the image below for guidance.
- If at any time you see excess water in the salt compartment going down the overflow, please call our service department on +44 (0) 1986 784759 (opt 2).

/ SALT FILL LEVEL

/ Q. EXTRA REGENERATIONS

- To start an automatic regeneration, press the left hand button  and release, the display will count down from 15 to zero. If at any time you wish to cancel the countdown, simply press  again.
- An automatic regeneration will start shortly.

R. BLENDING CONTROL - Blue/Green Stains

All our water softeners are factory set to produce water that is 100% soft. If you require slightly blended water - recommended on Combi/Condensing Boilers and in areas of hard water that have a green/blue build up in the scale - open blender bypass on left hand side of softener control valve slightly- until it takes 6/7 drops of the dark liquid to get a red to green colour change, as per the original water hardness test.

Blending Control

/ FURTHER INFORMATION

- Do not worry if your softener regenerates during the day. This is the built in CPP (Customer Protect Programme) initiating an additional mini regeneration, as the softener does not have enough soft water to last you until the next programmed regeneration of 2am. A regeneration typically lasts 42 minutes for the Ultra HE and 63 minutes for the Premio HE. During this time the softener goes into hard water bypass, ensuring a continuous supply of water. A Normal regeneration is programmed to 2am, a time when little, if any, water is being used.
- To change the regeneration time, simply offset the Time Setting i.e., to have the unit regenerate 2 hours later, set clock 2 hours slow - see N.
- If using the battery to power the unit, the battery life will depend on how many regenerations are activated, depending on water use. Therefore please ensure you change the battery when indicated (by low battery indicator on the display screen, and when the audible alarm sounds) or at least annually using a 9V lithium battery (6LR61).

/ GOING ON HOLIDAY

- Fig 4 shows the Rapid-Fit bypass in the Service position. This is the normal operating position.
- Simply press the central plunger from Service to Bypass as (See Fig 3) shown by the arrows on the unit and confirmed by the pics opposite.
- If going on holiday we recommend removing the battery (if used) to help prolong the battery life (don't worry all your settings will be saved).
- If using mains power, please turn the power off.
- Reverse the above and place bypass back in Service upon your return.
- Reset time (if necessary) by reverting to Set Time of Day.
- Activate a manual regeneration by pressing left hand button  on controller. Display will countdown from 15 to zero. Please be aware that during the regeneration, the softener goes onto automatic hard water bypass, so it is recommended to use washing machine etc after the regeneration is finished when full soft water will resume.

Fig 3.

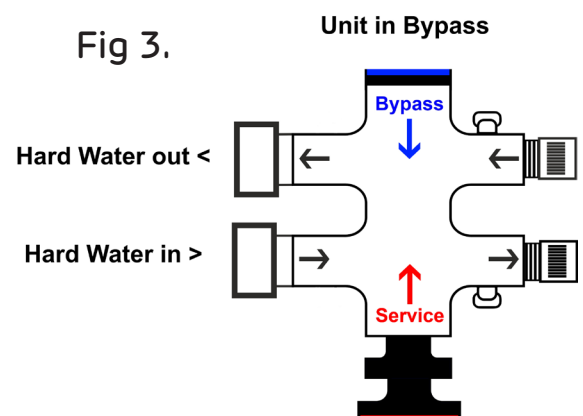

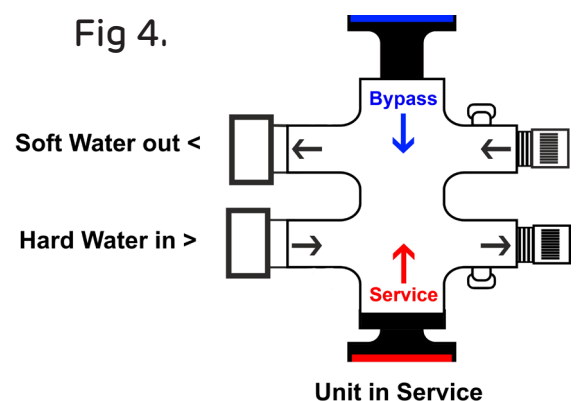

Fig 4.

/ TRANSFORMER INSTRUCTIONS

1.

Remove top cover and salt lid

2.

Slide the display PCB housing up out of the cabinet

3.

Remove the piece of rubber on the back

4.

Connect the transformer to the connection point at the bottom of the PCB housing

5.

Slide the PCB housing back in to place

6.

Turn the transformer on, there should be a small transformer symbol on the top left hand corner, Return the top cover and salt lid to their original positions

/ HINTS AND TIPS ABOUT YOUR NEW WATER SOFTENER

1. Please ensure that any appliances (washing machine etc.) used during 'Economy 7' time, do not begin their cycle between 11pm and 5am.
2. To ensure the highest efficiency is obtained, it is recommended that you top up the unit with the correct salt (Monarch's Ultimate Tablet Salt for the Ultra HE and Premio HE or Block Salt for the Ultra HE only on a weekly basis. It is a lot easier to remember than monthly! DO NOT fill salt compartment 100% full, kindly leave a gap of 30mm between the top of the salt and the front of the salt compartment, ref to drawing on page 7. Filling your softener on a weekly basis is a lot easier to remember than monthly! Never let the salt go below half way down the cabinet, as this will affect the performance of the softener. IMPORTANT: The quality of your salt will help determine the operating efficiency and reliability of your softener. Monarch strongly recommends its own Ultimate Tablet or Block Salt. All salt used should be BS EN 973 Grade A standard. If you would like to purchase salt from Monarch Water please visit - monarchwatershop.co.uk.
3. Bath and shower surfaces will become smoother - be mindful of more slippery surfaces.
4. Cut washing powder down by at least a 1/3rd or you will go into a kitchen/utility room full of suds!
5. Soft water will become available throughout your system in varying time spans. Conventional systems (tanks in your roof) will take anything from 4-10 days, whilst mains fed Pressurised Systems will give soft water within 2-3 days.
6. Dishwashers - On most installations the dishwasher is to be connected to the soft water. We recommend that you continue to add a small amount of salt to the appliance as before, as this helps the salt holder in the appliance stay clean. We do not however recommend that crystal glass, solid silver- or silver-plated items are washed in your dishwasher as etching may occur. Less dishwasher liquid may be required and in certain cases this will also apply to rinse aid. On dishwashers connected to hard water, you should continue to put salt into the dishwasher's own softener. If in any doubt if your machine should have either hard or soft water, please contact your dishwasher manufacturer.
7. Steam Irons - We do not recommend the use of soft water in your steam iron as most are designed for hard water and to be periodically de-scaled. Alternatively please use de-ionised water.
8. Outside Tap - It is recommended to leave your outside tap on mains hard water. Additionally, in the wintertime we recommend that this tap is isolated via an internal valve to prevent freezing.
9. Existing scale - Soft water will immediately begin to de-scale your pipes and appliances. Your hot water cylinder will take longer to de-scale than your pipe work; therefore you may notice different levels of soft water for some time whilst the system is de-scaling. This is particularly noticeable in your bath and shower.
10. Every boiler has two sides to its operation. The radiators are classified as the 'primary system' and the hot water through the taps etc is called the 'secondary system'. All the benefits of soft water are enjoyed in the secondary side of the system, i.e. cold and hot water in your shower, bath, toilets, appliances, your hot water cylinder etc. The majority of boilers primary side are designed to be used with hard water. Therefore in compliance with the HHIC and boiler manufacturer guidelines, place softener on bypass and fill primary system (radiators) with hard water and the appropriate inhibitor. The inhibitor is designed to keep the radiators operating at maximum efficiency. Once the radiators are filled with hard water, place your softener back into service. This will return the remainder of the system (secondary) to soft water throughout.
11. Accumulators - please ensure that the softener is installed on the outlet of an accumulator.

/ IMPORTANT

Monarch recommends Ultimate Tablet salt or Block Salt in their Ultra HE and Ultimate Tablet salt only in their Premio HE. - Visit monarchwatershop.co.uk if you'd like to order salt from us.

/ MONARCH WATER DOMESTIC WATER SOFTENER WARRANTY

This water softener is covered by 7 year parts and 2 years labour warranty upon registration with us, for installation within the hard water regions of mainland England, Scotland and Wales (including Isle of Wight) from date of original purchase. Installations outside this area are automatically covered by a 7 year parts only 'exchange' warranty.

PLEASE NOTE - This warranty has the following conditions, and is not covered by the following.

1. Damage caused by high water pressure, we strongly recommend a 5 bar water pressure limiting valve on the inlet to your water supply, where daytime water pressure exceeds a static pressure of 3.5 bar (50psi). Your softener needs a minimum of 1.5 bar dynamic pressure to operate.

2. This water softener is suitable for a mains water supply only.

3. The majority of debris in water is caused by local authority work on the water main. If notified in advance, by your local water authority, please put your softener onto 'bypass', see Fig 3 on Page 6. For Bypass: Press central plunger as per directional arrow towards Bypass.

For Normal Service: Press central plunger as per directional arrow towards Service. See Fig 4, Page 6.

4. Callouts due to incorrect installation. If you have any queries when installing your softener, please call your supplier.

5. The wrong type of salt used and the softener being allowed to run out of salt.

NOTE: Use TABLET OR BLOCK SALT for the Ultra HE and TABLET SALT ONLY for the PREMIO HE.

6. The use of any other hoses than those provided. Under no circumstances use washing machine hoses.

7. The build-up of salt fines in the bottom of the salt compartment. Although Monarch recommends Ultimate Softener Salt, it recognises this is not always available, therefore please note, it is the customers' responsibility to ensure the salt is of good quality and condition when used.

8. The effect of aggressive water, the degradation and/or blinding of resin and/or chlorine attack on resin.

9. Under no circumstances plumb in the softener in solid copper.

10. The installation kit (including Rapid-Fit bypass) is only covered by the OEM twelve-month parts 'exchange' warranty only.

11. Compensation as a result of cancelled appointments, damage caused by, or incorrect installation of the water softener. In the unlikely event of a fault, put the softener onto Bypass, see 3 above ref 'For Bypass' until an engineer calls.

12. Please note that any callouts within the warranty period that are due to external influences affecting the operation of the softener, may incur a charge.

The above does not affect your statutory rights.

/ SERVICE CARE

The manufacturer of your water softener includes 60+ years of manufacturing experience, to give you a water softener that is arguably the most reliable on the market today.

One of the aspects incorporated into the manufacture of your softener is 'Prevention is better than cure'.

Monarch strongly recommends a service once every 1-2 years depending on use, to ensure optimum continued performance.

We will of course inform you when this service is due and arrange a convenient time for our engineer to call.

Therefore please ensure that you register your warranty with us at monarchwater.co.uk/registration or scan this QR code:

/ MONARCH NATIONAL SERVICE COVERAGE AREAS

All postcodes within the hardwater areas of mainland England, Scotland and Wales (including the Isle of Wight) are automatically covered by a parts and labour warranty as set out in the relevant brochure for the individual model/range.

/ IMPORTANT

Water softeners sold outside of the hardwater areas of mainland England, Scotland and Wales (including the Isle of Wight) are to be strictly covered by a parts only 'exchange' warranty as determined by the model/range of softeners i.e. Unit with 7 years parts.

All parts sent back to Monarch are at the expense of the sending parties. All repaired or replaced items will be returned to the sender on a no charge basis whilst covered by the parts exchange warranty.

Once the parts exchange warranty has expired, Monarch reserves the right to make a charge for any postage/delivery, labour and parts charges that is deemed necessary.

Monarch will endeavour to keep these charges at the lowest cost whenever possible.

We're here to help
